

## HP Unix Server Bolt-ons

We understand that your business needs a changing yet stable IT operating environment. In particular one that operates effective application development alternatives that will optimise your application performance. The HP-UX 11i offers rapid deployment of your business services enabling you to meet your customers needs and demands.

HP-UX 11i is able to offer flexibility with the level of control that can manage and support and deliver your services on demand. HP-UX 11i is the operating system that supports e-services and HP-UX servers on both PA-RISC and Itanium processor families, offering high availability and flexible capacity. This operating system gives you a high level of security to protect you and your customers, as well as offering manageability to lower the cost of ownership and take control of your assets.

Listed below are four operating environments from the HP-UX 11i range that we are able to offer:

**Internet**

**Enterprise**

**Mission-Critical Deployments**

**Technical Computing Environments**

All four of these operating environments provide you with a cost effective option that is easier for you to support and maintain.
