Remote Support Access Applications

We are able to offer our customers **pcAnywhere™** by Symantec, which is a leading remote control software application. This software encompasses powerful encryption and authentication, it gives you the assurance that your remote sessions will be secure. You can speed up performance with the new optimisation wizard. You can also use **pcAnywhere™** with cable and DSL modems for rapid remote control sessions. This latest version is even faster with easier to navigate directories on both machines when you are transferring files.
